

# DAILY BULL

The Daily Bull is probably not suitable for those under age 18 and should not be taken seriously... like sporks!

Wednesday, October 18, 2006

"Kids. They're not easy. But there has to be some penalty for sex."

~Bill Maher

## Problem Solving Methods for Mechanical Eng.

Yusuke Hasegawa  
~ Guest Writer ~

After a dry spell of not having a girlfriend, I went to see a Mechanical Engineering friend for some dating advice.

"Oh almighty Mechanical Engineer, I have come to you for advice."

"This had better be urgent for it to make me put down my graphing calculator. I have an important exam early tomorrow morning where we get graded based on how well we can draw arbitrary graphs."

"What can I do to meet some girls worth meeting?"

## How To...Escape Death...with Style

By David Klemens ~ Daily Bull

A very lucky Slovak man has inspired me to write this article. For you of those who do not know, a man escaped from an avalanche in a very odd way. He was on vacation when he and his car were buried underneath a huge mass of snow. At first he tried to dig himself free, but then realized that the snow would fill the car before we could clear a tunnel out of the snow. As he sat back for a beer, he thought, "How can I escape?" Soon after he had to urinate and he had an idea. "I can tunnel through the snow and then pee on the snow to melt it." 60 half-liter beers later the man was free.

In the event that you are in a car speeding out of control toward a rocky cliff and you find that your brake lines have been cut, this is what you'll want to do, MacGyver style. If you jump out of the car you'll car will be totaled. You don't want that. Dig out your spare tire, tire iron and jumper cables, piece them together and make a grappling hook climbing harness only without the grappling hook. Now the fun part, you want

to open up your door and throw the tire out having it bounce underneath rear wheels thus spinning the car so it isn't facing the cliff. A word of caution, if you miss the wheels you most likely will get pulled out of your car and dragged underneath the wheels, at least your car won't be totaled.

Being chased by a shotgun-happy father that finds you with his daughter is pretty dangerous, unless of course you're from Alabama in which case she is probably your sister anyway. You're first idea naturally would be to jump into your car and drive away. What if he shoots your tires? You could crash and then he would come up and get you. A safe escape would be to take the girl and use her as a meat shield. What father would shoot his own daughter? Even if he does shoot, you have something to block or slow the barrage from the shotgun.

If you don't escape from the girl's father or maybe drove through Detroit, you might want to know that dying from a gunshot wound to the gut

...see Death on back

You know it's the beginning of winter when you see more snowmobiles in the UP than cars!

...see ME's on back

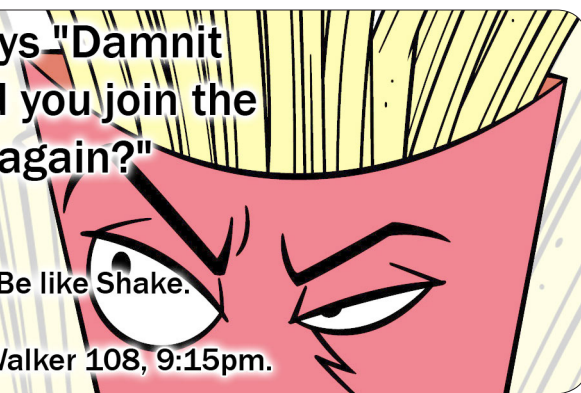

## Pic of the Day

Now that's a drinking fountain!

Frylock says "Damn it Shake, did you join the Daily Bull again?"

Screw Frylock. Be like Shake.  
Join the Bull.  
Wednesdays, Walker 108, 9:15pm.

### ...Death from front

can take up to a week, depending on how injured you are. Sure you can go to the hospital, but that's a weakling's way out. First step is to extract the bullet; long needle-nosed pliers should work. If you don't have any on hand just go to the nearest hardware store and pick up a pair. They come in handy for many things. Next, you have to clean the wound. Any normal antibacterial soap will do. Finally, you have to stitch up your wound. Normal thread isn't strong enough to hold human flesh as a stitch. Use what everyone should have laying around the house, floss! Not only is dental floss a way to fight Gingivitis, it is also a high tensile material and smells nice too. Mmm, cinnamon.

By reading this article I hope you've learned something. Don't take the

easy way out when it comes to playing games with Death. Take a stand give him what for; pee on his snow.

The Daily Bull and David Klemens will not take responsibility for any outcome of trying any of these lifesaving techniques whether it be loss of limbs, broken bones or death. Have fun! 🍷

### ...ME's from front

"Well that sounds like a Mechanics problem. Let me draw a free body diagram. This dot represents you; it shows all the forces that act on you. As you can see, the direction of the resultant force is away from you, literally accelerating women away."

"Interesting..."

"This cow, on the other hand, represents a girl at tech. For the mass moment of inertia I have put 'Hideous Troll'."

"So what does it all mean?"

"Well let me look it up in the table in the back of my book."

"Engineers have tables for where to meet women?"

"Yea, it's actually a branch of Engineering called Applied Dildonics. Applied Dildonics is, formally at least, of the widest scope, and can be seen as encompassing classical mechanics as a sub-discipline

which applies under tech school environments."

"So what do you need to know?"

"What's your Omega?"

"I have no idea what that is."

"It's a constant of proportionality. It's your penis velocity in radians per second when you're standing on one foot and looking at a picture of Marcia Cross."

"7.39."

"Did you remember to model it as a four-bar linkage?"

"Oh... 8.48."

"What's your major?"

"Computer Science."

"Hmm... That's not going to help at all. According to this table, you're 'Shit out of luck'."

"Is there really no hope?"

"Well, this table rounds up to the nearest 10,000ths place, and that's all you really need for practical applications, but according to the First Law of Thermodynamics, I would conclude that you should just kill yourself now and save yourself the misery."

"That's very disheartening to hear, sir."

"Don't get too depressed Yusuke, this table only covers girls from the Engineering department. There are plenty of other majors for you to explore."

"Like what?"

"You could try a Forestry major. I've heard that they are great for a rebound. There are also Environmental Engineers. Contrary to what you might assume from the name, Environmental Engineering isn't actually a true Engineering discipline. Hippies just use it as an excuse to learn college-level math."

"Yea but I'm not interested in girls with beards..."

"Then perhaps Michigan Tech isn't the right place for you."

"I suppose it's better to be without a girl than to be with the wrong one." 🍷

## Cry for Help

Michael Denomme ~ Daily Bull

Are you disappointed with the quality of our Bull? Are you finding our humor rather dull and lame? Do you have any ideas that you think are better than ours?

If you answered "No" to any of those questions, then come to Walker 109, Wednesday at 9:15

to claim your prize (free pizza). However if you answered, "Yes" to any of these questions then you need to come to Walker 109, Wednesday at 9:15 to help us come up with better ideas and get free pizza.

You see, if you think we're getting 'boring' and dull, there's a little something we like to call 'Writers Block.' Now unless you're someone like McInnes and can write three whole articles randomly in one sitting and turn them in on time. But, if you someone like me who really didn't pay much attention in English and grammar class, it is possible for you to write an article. Right now there's like 15 people that show up to meetings and write for the Bull. We want more. Our boring trend lately isn't due to the fact that we are "no longer funny," but the fact that there isn't enough variation. What you're seeing is the paper form of what it would be like if there wasn't that many people left on the planet. See why we don't want nuclear war?

All in all what I'm trying to say is please write articles for us! You don't have to join the Bull, you can simply be a guest writer, and we just need your articles. Piles are expected to improve with the greater population at meetings. Did I mention FREE PIZZA?!!!!

How many times do I have to say this? Please help me for the love of god and all that is holy...COME TO THE DAILY BULL! 🍷
