

# DAILY BULL

The Daily Bull is probably not suitable for those under age 18 and should not be taken seriously... like writing papers!

Tuesday, April 3, 2007

"One of my movies was called 'True Lies.' It's what the Democrats should have called their convention."  
~Arnold Schwarzenegger

## The Devil Lives in 3rd Floor MEEM

By Mike Senkow ~ Guest Writer

The Devil lies on the third floor of the MEEM, room 305, Energy Lab. You don't believe me? I have proof! You wonder why the professors in the ME department may appear so evil at times. You understand the homework; you got the right answer, but NO! 0 points! Why? They'll tell you in their office. When are their office hours? Whenever you can't be there!

The devil lies in the MEEM's Energy Lab, inside an Armfield TH3 Saturation Pressure Rig. Inside that little metal vessel, all the evil of the universe resides, and each semester, when another group of students performs the "Saturation Pressure & Vapor Quality" lab, they release a little more of his evil into the world. He's trapped inside I tell you,

## Nationalistic Radiation Particulates Discovered

By Scott Nelson ~ Daily Bull

In recent months, many researchers in the Michigan Technological University Department of Anthropology determined that many students exhibit "un-American" behaviours whenever they come up to Michigan Tech. On multiple occasions, students have been observed elongating their vowels, creating a long drawl of incomprehensible sing-songy words, while frequently utilizing the words, "eh," "aboot" and "zed." However, the concerning behaviours do not stop at speech, many students have begun to display liberal tendencies and support parliamentary government in general.

For months, the researchers were baffled by this occurrence and set out to discover the cause, supported by millions of dollars in funding from the university. The first theory involved the presence of nuclear waste underneath Lot 10, but after exposing the nuclear waste to students from NMU, they only realized that they were ruining their lives and decided to be productive members of society by working in fast food. Obviously this radiation would

not be the cause of the behavioural changes in the students, the researchers would have to discover something else that would affect the students in this way. Then, during one late night, Dr. Scarlett while watching some random movie for World Cultures discovered the truth, Nationalistic Radiation Particulates.

The theory behind these particulates is quite clear, the Canadian Nationalism is very strong and it is ejected into the atmosphere when it is created during a time of pride for the Canadians. The particulates from Toronto and Ottawa will get caught in a low-pressure front that circulates over Lake Superior and as the particulates circulate, they will become polarized and bound to the moisture in the air. The particulates will then precipitate down on to the UP, to be absorbed into the skin of the students. The radiation will then travel to the cerebrum and affect the speech and social centres of the brain by overcoming the weak nationalism instilled in most Americans. It seems that some students are immune to the

effects of the particulates because the American Radiation, which causes ignorance to international issues and support of the Iraqi war, is already controlling them.

A similar occurrence has also been observed at Arizona State University, where students have become lazy, drunk and they have the distinct desire to climb fences to mooch off of other governments. This has been attributed to the Mexican Nationalism Radiation Particulate, which comes through the moisture stream that flows westward from the Gulf of Mexico and deposits itself in the Southwestern Region. Many other types of radiation have also been discovered, which lends it to states, rather than nations. For example, the Californian Particulates will make a person foolishly vain and spoiled, where the Massachusetts Particulate will make you intellectual,

yet pompous.

The researchers around the world have celebrated this discovery, which decrypts the great mystery of nationalism through history, including the spread of communism through radiation dispersal techniques and the use of the particulates to brainwash people in France to despise all other countries. ☹

but a little bit escapes, and wrecks havoc on the world.

You may ask how I know this. Well, in this week's lab I SAW him! Beelzebub, the Morning Star, Satan! The lab was like many others, slightly boring, not extremely exciting. We were learning new methods on how to determine pressure and temperature after going through a throttling process. You superpressurize the water and then measure its pressure and temperature after it goes through he valve. Maybe this is what brings him into existence.

Our pressure wouldn't go past 666 kPa. I joked slightly when it was getting into the high 600's, "Ooo, our pressure gage is evil," but then it stopped. 666. THE SIGN OF THE BEAST! I stared slightly, thinking it was just a weird, but normal coincidence, but then we let the pressure off. As it dropped, the water began to bubble, frothing further and further, until at 100 kPa the TA let loose

the rest of the pressure.

I saw his face. Thrown back in a laugh, the evil that resides in this world and causes all that is wrong; death, famine, disease, George Bush, The Game (You lose by the way) and he resides on the 3rd floor of the MEEM.

(Warning: The author of this story in no way believes in the Devil, Hell, or your mom.) ☹

**Is the Glass Half Full or Half Empty?**

By Lee Aschim ~ Guest Writer

At some point in your life you must have asked yourself if your glass was

half empty or half full. Well, today is your lucky day because the men of the square room (comprised of one mechanical engineer, one civil engineer, and one computer science major) met last night to set the laws on these everyday terms. These prestigious men with their extensive knowledge of deep thinking came up with the first law of "The Glass."

They decided that a glass may be termed "half full" if and only if the glass was handed to a person with half the capacity of the total volume of said glass. Therefore, leaving the glass halfway to the peak without any consumption done by said person.

The men then further termed "half empty" to those who were handed a said glass filled to its capacity and aforesaid persons have consumed

half of that capacity. Thus leaving the remaining amount halfway to the empty point of said glass.

"This is revolutionary," said Jonathan Ehlers who has been eagerly awaiting the outcome of this law for years. Now the human race will never again have to worry about debating the age-old question, is the glass half full or half empty? ☹
