A kleptomaniac is a person who helps himself because he can't help himself.

~ Henry Morgan

Grumble Mumble

By Frank McGuire ~ Daily Bull

IT HAS COME TO MY ATTENTION THAT tuition is going to be raised yet again in the near future, as in as soon as they can change the numbers. This is what prompted this article, but then that lead me to an earlier rant that I had last spring and then I got hungry and went and got some food and then I decided that I wanted a beer and then I watched some TV and then I can back to my computer and found this article sitting here partially started and I thought - wait what the hell was I talking about? Why am I pissed off? What is the university doing?

Finally I remembered that I was mad at the Green Campus Enterprise. While I applaud their theoretical approach, I personally feel that their practical approach was a joke. In order to help promote recycling, they

Apple to Open Store in Space

By Alec Hamer ~ Daily Bull

THE CONSUMER RETAILER OF RIDICULOUSLY PRICED electronics, Apple, is planning to open a new flagship store on the International Space Station. Steve Jobs, CEO and co-founder of Apple, released a public statement saying, "We've already opened deep-sea and Himalayan stores, so we thought the next logical step would be to go to space, and that is just what we did with Apple Space.™"

News of the store's opening has shocked some and comforted others. Local Microsoft fanboy Michael went on record saying, "Fuck that!" along with "Who the hell needs to buy a crap pod in space?" Whereas Brett, a pretentious mocha drinking hipster, had to say "Yeah... It's cool, you know, to open a store in space," adding that "I hope to visit it some day."

It's not only the general populace that's weighing in, politicians apparently have opinions too. Bill Clinton said, "That's one sexy store" and Sarah Palin said "I can see an Apple store from my house!"

The opening of Apple Space™ cost Apple an estimated \$47.23 billion.

A shocking figure, considering most estimates put the value of Apple Inc. around \$160 billion. On how the company can afford such grand expenditures, Steve Jobs had to say "Well, you see, we expect to average around a \$20,000 per year profit off of this store so assuming that number stays constant, the store should pay for itself in around 2,361,500 years. Easy as pie."

Unfortunately, Richard Gill, a respected economist and opera singer, disagrees. "There is simply no way that this store can be a success. What, with the economy the way it is and the absurd costs of rocket fuel, I just can't see this Apple store being a great success." After many hours of going on and on about "the laws of supply and demand" Richard finally came to this conclusion: "This Apple store won't be Steve Jobs' first failure or his last. I mean do you remember when Apple unveiled the Pippin, Lisa, or Newton? Me neither."

Currently Apple is in severe debt and closing all Apple locations on this earth while leaving Apple Space™ open for

the time being. Stocked with around 70 employees Apple Space™, it is the first Apple store to be open 24/7, causing more than a few stockholders to scratch their heads. But fear not! For Steve Jobs has the answer, saying, "Here at Apple, customer appreciation is king."

Fortunately, the opening of Apple Space™ has changed the landscape of consumer goods. As Steve Jobs himself said "[this store is] One small step for a man, one giant leap for mankind". Now producers have no qualms about selling unreasonably priced goods to you, the consumer.

Now this may seem like a grossly inaccurate statement, but Dell, the company known more for their affordability as opposed to their reliability released a new line of ultra luxury PC's to phase out the older "cheaper" models. Steve Jobs weighed in on this saying "I think this is a step in the right direction." ☺

Cooking with Nathan Invincible

Ah, good to see you old friend! Tired of dorm food already? I can tell. Either you've lost weight in a desperate bid not to ingest more than the bare minimum to survive, or you're attempting to get rid of it all by eating every single morsel. Trust me, that won't work. Eating pan after pan of gravy will get you nowhere.

Instead, you should take after yours truly, one of the world's foremost minds in culinary excellence. Yep... right up there with Emeril, Rachel Ray, and whoever came up with Dippin Dots. We've all got something to bring to the table, and in my case, it's yummy foods that require absolutely no prior cooking knowledge to complete. Bon appetit!

Warning: I am not responsible for exploded ovens.

Chili Con Carnival: This tasty dish combines two popular American traditions, eating spicy food until you cry and being terrorized by circus clowns. Brown a pound of beef in a pan along with a handful or two of chili powder. In a separate pot, mix some beans, chopped peppers, two cups of cayenne pepper, more beans, and water. Bring to a low boil while adding the meat and more chili powder. Simmer long enough to fill your house with delicious smells. Now, add the secret ingredient: *Cotton candy*. Melt an entire bag into the pot, stir, and serve. Results may vary, but blue cotton candy tastes best.

Meat that is on Fire: A delicacy served at only the finest of backyard patios. Buy a tube of 73-27 ground beef from the store, mush it into patty shapes, and throw on the grill. Seasonings are optional, but for those with a wild side, try olive oil or cinnamon. Turn the grill on to high. Occasionally flip the meat to evenly blacken both sides.

Squeeze the meat to disperse the flaming juices. With luck, the meat will catch fire, just like at fancy restaurants.

Sustainable Fish Dinner: Don't want to burden the oceans or go fishing? There's an easier and cheaper way: the Wal-Mart fish aisle. Gold fish these days are a dime a dozen, especially if you buy in bulk. Fry 'em up in some oil until crunchy, then devour. For different flavors, try feeding them different foods before you cook them.

Dagwood Sandwich. Probably the most delicious sandwich ever, the Dagwood combines every single yummy sandwich flavor known to man into one giant tower of mouth-watering goodness. Simply stack all available meats, cheeses, breads, and other ingredients together until it's too big to fit in your mouth. Do not cut into more manageable slices. Serves 1.

Energy Drink Oatmeal. Oatmeal is great and all, but eating it plain is a little, well, plain. Liven it up with a spoonful or twelve of sugar. Cook your oatmeal like you usually do, then dump in more sugar than is in a typical energy drink, as claimed by Five Hour Energy commercials. For an additional flavor blast, dump in the Five Hour Energy as well.

Infinitely Old Pizza. Have you ever wondered whether that pizza in the back of your fridge was still edible, or at the very least tasty enough to choke down? With my Infinitely Old Pizza recipe, you'll never have to worry again. Simply obtain that delicious pie as you normally do, then blast it off into space aboard a rocket ship. The sub-zero temperatures and total vacuum will preserve your pizza better than any zip-lock baggie ever could. And as a bonus, it's available the world over, since satellites can crash land just about everywhere. Take-out, anyone? ☺

... Computerize to Save from front

posted papers all over campus to different recycling containers to make people pay attention to them. This meant that hundreds of sheets of paper were wasted to promote recycling paper, along with other things like plastic and aluminum. To top this off, about half of these papers were laminated, thus using not only more energy to produce but extra plastic for that extra icing. And by extra icing I mean fuel to make me rant.

It also was pretty ridiculous that most of the posters, (at least that I saw) were up in the Forestry building. I personally have only ever had class there when I was a Forestry Major (ended that one faster than physics or chemistry!) so putting "green" ideas on the forestry building only hits a very small audience. To round it off, half of these little posters were torn down and either thrown out or put into the can that they were labeling which lead to more posters being printed off and compounding everything that was pissing me off. All in all, I agree with their ideals, but not their delivery.

In light of this, I propose that we as students refuse to hand in paper copies, take exams on paper, or use notebooks to take notes. We should do everything on the computer, and because it is so easy to talk to everyone on the computer I think that all communications should be through it. Everyone goes to class and then the only one that ever talks is the professor. If it is a discussion style class the class should vote, on the computers of course, on one person who will be the classroom speaker. Everyone will then IM their argument to the class speaker and then he/she can inform the prof of the class' thoughts. There could be problems with the speaker being sick, or not telling the teacher what everyone said, or other ideas, but those bridges will just have to be crossed when we get to them.

This increase in computer use will mean more people will need to plug into their classrooms and in the hallways between classes etc. This increase in power costs would be offset by printing costs of all the paper that is not being used, as well as by seat pedals. That's right, Seat Pedals. Every lecture hall seat will be equipped with a set of pedals that is connected to campus's power grid. This way, students can power everything they need right in their chair. Ambitious pedalers can even make the university money by creating more energy than is used. Tie this into my night idea and bingo, everything solved. ☺
