## The Wrong Batteries, Part Two: Prometheus

By Zambi ~ Mystery Sender-Inner

2, then 2:30 in the morning passed. Despite my 9 am biochemistry class looming on the horizon, I stayed awake; feverishly setting up and taking down circuits of batteries, hair straighteners, phone chargers, and anything else electric I could get my hands on. I had to make this little gray Furby come to life, no matter the odds. This was the life I had chosen.

At 3 o'clock, it finally came together. My roommate's hair straightener, plugged into my computer charger, which was then connected to a series of 9-volt batteries by a long copper wire I had dug out of the dumpster, creating a loop that connected back to the poor furball. I sat back a mo-

## Tech Patents New Form of Renewable Energy

By Olivia "Not A True Story" Zajac ~ Daily Bull

HOUGHTON, MI — The research is done and the results have been thoroughly tabulated. A scientific study, funded by the DOE, has finally come to a solid conclusion here at Michigan Tech. In cooperation with the sponsors that help run the Alternative Fuels Group, SAE Clean Snowmobile Challenge, the chemical, mechanical, biomedical and electrical engineering departments, as well as the biology and exercise science departments, the university has patented the newest, cleanest, and sure to be the

most reliable source of renewable and sustainable energy: sexually frustrated students.

"When you think of the amount of frustration that some of these, well, mostly male, students have, we thought that we might be able to take advantage of all of that wasted energy. Over the years, it seems, even with the increase of the female demographic, it created an overall increase of sexual frustration of about 30%, if the women represented

ment to marvel at my work, stretched across the entire dark room and even heading out the window a bit before coming back to my desk. The final moment was approaching. It was time to see if my long night of work was worthwhile. I flipped the wall switch.

Immediately sparks flew out of the light socket and the wires began to hum, even though my knowledge of circuits told me this was impossible. I jumped backward, afraid of what I might have created, yet excitement coursed through my body. Through the crack at the bottom of my door, I could see the hall lights flickering. I glanced back, and the Furby's eyes were pulsing in time with the ceiling lights. A garbled, high-pitched groan came out of the little plastic mouth as the eyes rolled in its mechanical head. "IT. IS. ALLIIIIIVE!!!" I shouted, waking my roommate suddenly and unpleasantly. "I did it! I have brought the dead

back to life! In your face, Frankenstein!" "Go the fuck to sleep. It's 3 in the morning. Seriously, you have class..." her phrase was cut short as she saw the furby stand up, shake, and rip out its own wiring. "Oh my god, what have you done?"

The Furby hopped off the desk and onto my chair, staring at us through the shadows with piercingly bright eyes. It made a noise like a dial-up internet connection and lurched toward us. Acting as one mind, my roommate and I grabbed our keys, ran out the door, slammed and locked it. As we caught our breath, we realized that all the hall lights had burned out, leaving us in darkness, and the people who had heard the commotion were beginning to congregate around us. "Generator failure" and "gas leak" were common whispers.

"What monster have I created?" I muttered. Then the true horror dawned on me "Oh no... I can't get to my organic chem notes!"

"We can't go back in there... it's too dangerous!" replied my roommate.

"I have to. My GPA depends on it."

A stranger handed me a flashlight, and I slowly worked up the nerve to open the door and grab my notes for tomorrow. I took a deep breath and turned the key. As the door swung open, I noticed a draft. The window screen was gone, and the gray Furby was nowhere to be seen. The people of DHH gasped in horror.

"We have to find him."

(Part 3 coming soon... stay tuned!) 🐾

25% or less of the student body," said one researcher. "Interestingly enough, the amount of sexual frustration energy, or SFE, we can extract from single females on campus is equivalent to that of three single males. Essentially, it gives a new meaning to the Tech Ratio."

The engineering departments have created a prototype SFE adapter that students can wear and hook up to a generator in any of the three dormitories, the ChemSci, the MEEM, the EERC, and deposit the energy they created. The university and the researchers have met on the terms that the device will continued to be studied and improved upon for the next 15 years. "The good news about the development of this energy harness is that it will allow for students to lower their own tuition. By letting us harness their sexual frustration for electricity and other university needs, we will credit their accounts accordingly."

The Center for Diversity and Inclusion, as well as admissions, is fighting tooth and nail against the rest of the university's joy of getting off the grid. "It's great and all, but we still need to reach out and get more women up here! They flat out told us that after all this time, we are no longer openly encouraging women to enroll at Michigan Tech. Due to this new 'discovery' of theirs, they won't allow us to admit more than 28% females in each new Freshman class because the Tech Ratio conveniently optimizes this SFE output."

Students have mixed feelings on the issue. "I mean, it's cool that I can basically knock my tuition down to a few hundred dollars based on the amount of this SFE I can apparently produce," one 3rd year female said, "but, like, I wanna get laid as much as all those guys. Just not by them. Ugh! I basically have to pick whether to become a dried up, sexless prune of a girl, or be in debt forever. It's a tough choice!"

"The university is hoping that students will choose paving the way to a clean emission future over their desire to copulate," quoted Glen Mroz, man of golden pants. "But with the way this economy is going, it is to their financial advantage to just wait to have sexual relations until after the graduate. I mean, it seems like that's how it was working out before this SFE adapter harness, anyhow." 🐾

## Student Rents Zip-Car for Non-Reckless Driving

By Alex Dinsmoor ~ *Daily Bull*

Reports from all along College Ave have all showed that this past weekend, a student was driving in a Zip-Car and not excessively speeding or breaking significantly harder than he should have. People stood in awe as they watched the unnamed driver drive normally as if the car was actually his own.

"It was crazy, he seemed as if he was responsible for the car. He wasn't wearing down the brakes or tires; it was almost like he wanted it to be in a good condition for whoever has to drive it after him."

This report dramatically contrasts all previous reports of Zip-Car usage; people drifting the Yooper Loop, accelerating really fast then slamming on the brakes, and driving in potholes. Also known as the "demolition derby car" on campus, people have been known to do ridiculous things in them, as long as they return it on time as to not avoid the late fees. "It's great," one anonymous student states, "I can do all the things I want to do in my car, but without all of the lasting effects of driving like a dick!"

It's currently unknown if the responsible person who rented the Zip-Car will ever be able to rent it again, since there is a clause in each contract that explicitly states that "If you haven't left a millimeters worth of rubber on the roads from the tires, you're doing it wrong" and from our reports, the *Daily Bull* knows that he was certainly "doing it wrong." 🐾
