

DAILY BULL

The Daily Bull is probably not suitable for those under age 18 and probably should not be taken seriously... like ALL of the text!

Tuesday, November 1, 2011

The Bible tells us to love our neighbors, and also to love our enemies; probably because they are generally the same people.
G. K. Chesterton

How to Get on Google Earth (Part 3)

By Nathan "Invincible" Miller

As promised, here is the third part in my accidental series, "How to Get on Google Street-view/Earth." Quick recap so far: I've chased down the Street-view car AND been captured in 3-D by the Bing Maps Navteq service. The only thing left was to get on Google Earth's satellite imagery. Which, as it turns out, I did years ago.

The secret to getting on Google Earth is to be outside as much as possible. We're talking for months on end, nonstop, all day. As far as I know the public does not have access to a satellite tracking service that would be able to pinpoint exactly where Google's imaging satellite is at all times, so there is no way of knowing when it may be overhead. Therefore you've got to be ready and waiting for it.

Neuro-mo-logical Deficiencies Lead to Pants Sagging

by TheHoboSapienChief ~ Daily Bull

Time yields many changes to society and culture with the influx of different technologies, natural disasters, and mixing of peoples. Such changes may include the rise and fall of Pogs, impromptu abbreviations (totes, appreesh, vom, etc), the "poof," and talking with pseudo-post-stroke accent. Some changes influence the world more positively than others.

In a Bull investigation of this subject, we discovered that some fads are effects with causes that are different than the intuitive. One test case of this was the examination of low riding (pants). We interviewed Professor L. R. Jenkins, Ph.D. in Extreme Social Deficiencies, about the issue, as it relates to his recent research. "Originally, we thought that low riding might be a result of physical problems; poor belt/pants design or even a factor of awkward posterior growth. However,

These pants are exposing just how much of an ass he is!

this hypothesis did not hold up to the lab tests."

Professor LeeRoy continued to explain that the current hypothesis that low riding may be a neurological problem inherent in the individual is looking promising with the recent set of tests. "The most recent tests are still under analysis, but so far the data seems to indicate that low riding is a result of inhibited brain pathways connecting the common sense and the practicality-evaluating parts of the brain. While the cause is not known yet, there appears to be a strong correlation between skateboarders and low riders. Whether or not one is an effect of the other or just a coincidence is still under investigation. We've also seen some other correlations with low riders. They tend: to wear stripes, saggy hats, and thick

... Earthly board from front

It's one thing to be outside all the time, and it's another to know where exactly where you are every day. Luckily for me I kept track, and I have photo evidence to back it up. For 3 summers I spent part

or most of my time down on my family's ranch in Texas, tending to our property and building homes for our fainting goats. At the beginning of each day, I took a picture of the previous day's work progress. That way I could go back and see how efficient I was.

Unbeknownst to me, one of the days I was out working the Google satellite flew overhead and snapped a picture of our area. Images don't go up instantly,

and it would be more than two years before they went live. Because I check Google Earth incessantly, I was ready to seek myself out.

And lo, there I was! Plain as the daisies! <--- Here is a zoomed in screenshot of me building our first goat house.

It may not look like much, but I can assure you I am right there in that picture. By studying this image in much the same way that scientists do low-res images of extra-terrestrial worlds, I was able to discover an awful lot about it. Check out these next two images and I will explain.

This picture is of the stone I used to build the house with. Before I did anything, I organized it into three piles, one for each size. The original heap of stone is on the left outside of the picture. If you look at the satellite image, you can clearly see the

three organized piles above the larger heap near 'A.'

The picture on the bottom is of the completed house. The Ondura roof came in large red panels that are assembled like giant shingles. Prior to putting them on the roof, I had them in a pile to the right of the house, near 'B' in the image. Under the panels is black tar paper. If you look closely at the satellite image near 'C', you can see the difference between the two colors on the roof. That's because the image was taken while I was still installing the panels, meaning I was up there nailing them down right when satellite flew past.

Because I took pictures of all my progress, I was able to determine that the satellite passed over on June 1, 2008, the final day of construction. Looking extra closely at the satellite image, you can just barely make out a light-colored blotch amongst the dark roofing. I can safely assume that's me.

Think the evidence is inconclusive? Don't believe those pixels are me? Require color images or lat/lon coordinates? Have better proof that you've done it yourself? Drop me a line at nmmiller@mtu.edu, I'm up for a chat.

rimmed, square glasses, and to utilize profanity in inappropriate context, among an ever expanding list of tendencies."

Professor LeeRoy and his team's research causes this writer to beg a few questions. If there does prove to be some sort of cognitive issue at the base of the problem, is there anything that need be done about it? Can it really be considered a fad? Or should it be considered a condition? Witnesses recently saw a man tripped up by his own jeans in an attempt to flee a crime scene. The under-conditioned officers were then able to bring this man to justice and prevent further chaos. With positive outcomes like that and a mental condition on the verge of being exposed, we can expect to add yet another topic for our soldiers on Capitol Hill to squabble over.
